

Invoice Image Rendering for Compliance-based Integration

HIGHLIGHTS

- *Creates PDF image of electronic invoices during B2B integration process*
- *Enables ability to archive, print and distribute invoice documents easily and securely*
- *On-demand image rendering in the Hubspan B2B cloud with no additional software needed*
- *Cost-effective add-on to any Hubspan integration solution*

Growing Demand for Invoice Management

Electronic invoicing has long been a critical component of many B2B integration processes. But there are new rules and requirements around how invoices are managed and exchanged both within an organization and between companies. In addition to the traditional message exchange, many companies today also need to create invoice images or attachments in order to comply with key business process workflows, compliance mandates or security policies. Most traditional integration products don't have an easy way to add this to an existing process. With SnapShot, Hubspan leverages its B2B cloud to automatically render PDF images of electronic invoices during a B2B integration process, quickly and easily, with no additional hardware or software required.

On-Demand Invoice Images

Hubspan SnapShot enables customers to simultaneously send standard electronic invoices via the Hubspan B2B cloud while automatically generating the PDF image, with both the electronic message and PDF delivered to the intended recipient. The invoice image is rendered while the invoice is being transformed and processed as part of the B2B integration transaction. Customers can leverage an image from Hubspan's template library or choose to customize the PDF invoice format using Hubspan's managed services.

SnapShot makes it easy to:

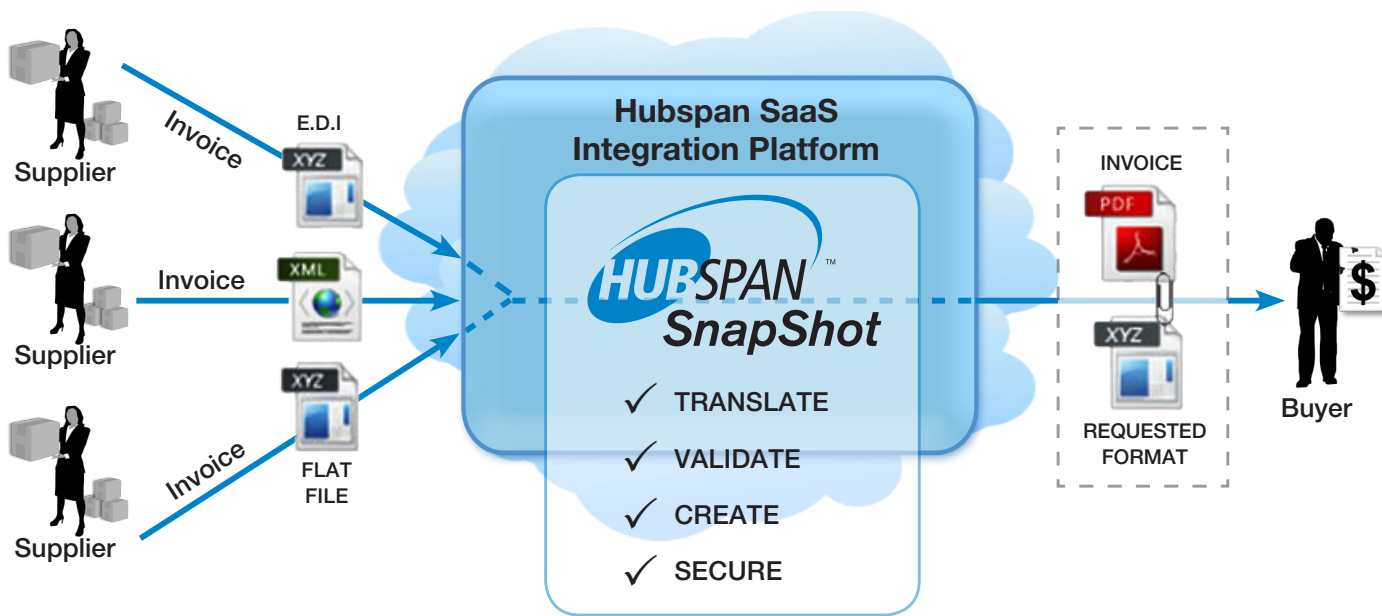

- Print, email and archive invoices exchanged during a B2B integration process
- Adhere to compliance mandates that require a physical image of invoices
- Send the invoice to an ancillary department or company that is not involved in the B2B Integration process
- Store and file a hard copy of the invoice document for record, archival or auditing purposes
- Adhere to federal archival requirements of digital invoices

Key features in SnapShot for Invoice include:

- **Automatic rendering of invoice documents:** Through a single automated integration process, customers can exchange electronic invoices and a PDF image of the invoice via the same Hubspan B2B cloud, removing manual processes and without any additional hardware or software.
- **Secure invoice sharing:** A SnapShot image is a secure PDF document that can be used for archival, compliance, dispute resolution, and workflow authorization processes.
- **Seamless, easy invoice exchange:** By automatically rendering an electronic invoice document into a PDF, customers can easily print, email and archive invoices as well as share invoices with internal and external communities.

Integration and Images in One Process

Snapshot enables customers to simultaneously send standard electronic invoices via the Hubspan B2B cloud while automatically generating the PDF image, with both the electronic message and PDF delivered to the intended recipient.

Use SnapShot with our electronic invoice integration process to automatically render PDF images of your invoices

About Hubspan

Hubspan is the leading provider of B2B cloud integration solutions delivered as a managed service. Hubspan makes it easy for companies of all sizes to exchange electronic documents and real-time messages with partners, customers and suppliers, from basic integration like purchase order and invoice exchange to complete business processes integration, such as eProcurement, eCommerce and EDI to cloud-based Managed File Transfer. As a cloud based platform, Hubspan can start connecting your integration community in just weeks. Thousands of organizations, from small enterprises to the Fortune 500, successfully use the Hubspan platform every day for real-time B2B integration. The Hubspan B2B cloud also powers integration for many of the world's leading marketplaces, supplier networks, ERP applications, and financial services solutions.
